

Standard 5.2 – Placement

The placement of students in an internship or Co-op position starts with finding out if the student has a preferred place of employment and where they live. This allows us to help place them near to where they live. After this we work together to find a place that will be appropriate. The students are then encouraged to contact the garage and inquire about doing their internship or Co-op there. At this point faculty will contact the garage to show them what is required of the student, the garage, and the college. The agreement is signed, and the placement can begin. The goal of this placement is to allow the student to learn in a real-world environment and potentially receive permanent employment upon graduation
